ABSTRACTED-PUB-NO: AU 9334065A

BASIC-ABSTRACT:

The pot is preferably shaped in such a way that the 'belly' of the pot is greater in diameter than the base and the neck of the pot. The decreased diameter of the neck of the pot is desirable as it assists in the retention

of  
the soil, or other potting mix used as a growing medium.

The root system of the plant establishes within the soil or other growing medium, further stabilising the soil retention and reducing the opportunity for the soil to drop out of the bottom of the pot. The interior surface of the pot is preferably textured in a manner to assist the root system to grip onto the interior wall of the pot as it establishes a growth pattern within the soil, or other growing medium.

ADVANTAGE - The water does not drip from the pot at the time of watering, and the soil does not drop out of the 'bottom' of the pot.
